TABLE OF CONTENTS

B.1 Lower Critical Solution Temperature Measurement .................. 169
B.2 Cell Migration on aECM-RGD and aECM-CS5 ........................... 170
B.1 Lower Critical Solution Temperature (LCST) Measurement

Figure B.1.1 Amino acid sequence of aECM-RGD.

Figure B.1.2 The LCST of a 10 mg/mL solution of aECM-RGD in phosphate-buffered saline (PBS), pH 7.3 was determined to be 35 °C by measuring the percent transmission at 300 nm on an Aviv model 62DS spectrophotometer (Lakewood, NJ).
B.2 Cell Migration on aECM-RGD and aECM-CS5

Figure B.2.1 Amino acid sequences of aECM-RGD and aECM-CS5.

Figure B.2.2 HUVEC migration on aECM substrates. Cells migrate more quickly on aECM-CS5 (0.71 ± 0.26 μm/min) than aECM-RGD (0.47 ± 0.16 μm/min). Cells were fully spread on aECM-RGD but were not always well-spread on aECM-CS5. A minimum of 80 cells were tracked every 15 min for at least 8 h. Error bars represent one standard deviation.
