Acknowledgements	iii
Abstract	vii
Introduction	1
1.1 Benefits and features of microbial consortia	1
1.2 Mixed populations can perform complex tasks	2
1.3 Mixed populations can be robust to changes in environment.....	4
1.4 Communication organizes function in engineered consortia.....	4
1.5 Synthetic consortia lend biological insight.....	10
Engineered bidirectional communication mediates a consensus in a microbial biofilm consortium	14
2.1 Abstract.....	14
2.2 Introduction.....	15
2.3 Results.....	16
2.4 Discussion.....	25
2.5 Methods.....	26
Structure and selection in an engineered symbiotic biofilm consortium	30
3.1 Abstract.....	30
3.2 Introduction.....	31
3.3 Background: Evolution of communities	31
3.4 Background: Physical structure of biofilms.....	36
3.5 Design and construction of the symbiotic consortium.....	46
3.6 Function and stability of the biofilm consortium.....	52
3.7 Physical structure in the engineered symbiotic consortium.....	56
3.8 Aggregates in the transfer of emergent structure and growth advantage.....	59
3.9 Adaptation or polymorphism and the growth advantage.....	62
3.10 Third-generation biofilms reveal contributions of adaptation and aggregates .	64
3.11 Discussion and conclusion.....	67
3.12 Methods.....	70

Conclusions	74
4.1 Challenges in engineering microbial consortia.....	74
4.2 Synthetic consortia in healthcare	75
4.3 Summary	76
Bibliography	78
Appendix A	95
A.1 Plasmids encoding Circuits A and B	95
A.2 Validation of model in liquid culture.....	96
A.4 Biofilm experimental setup, imaging, and image processing.....	98
A.5 Biofilm imaging equipment and settings	102
A.6 Three-dimensional image rendering	105
A.7 Image processing	105
Appendix B	109
B.1 Details of construction of strains MGd- and MGfwc-	109
B.2 Stability of the engineered symbiotic biofilm.....	111
B.3 Metrics and COMSTAT image processing.....	112
B.4 Repeatability of growth advantage in untreated second-generation biofilm ..	113
B.5 Images of treated and untreated biofilms at the substrate.....	114
B.6 Emergent structure does not reappear in the third-generation control biofilm	116
B.7 FACS was used to separate aggregates and YFP+ single cells	117
