

List of Tables

5.1	Tuning parameters for the windowing algorithm	102
5.2	Windowing code parameters for three scenarios	102
5.3	Example events for windowing algorithm	103
6.1	Standard 1D reference model for southern California	132
6.2	Parameters used for the window-picking code FLEXWIN	132
6.3	Summary of the tomographic inversion	133
6.4	Summary of seismogram measurements	133
6.5	Tabulation of simulations for each earthquake and each model iteration . .	134
A.1	Classical tomography versus adjoint tomography	167
A.2	Source and structure inversions	167
B.1	Sensitivity kernel expressions	172
C.1	Units for multitaper adjoint quantities	184
D.1	Classification groups for all 294 earthquakes	193
D.2	Eight columns of Figures D.1–D.37	194
E.1	Southern California station–epochs with problematic polarity	235
