

EXPLANATION

- Quaternary
  - QA1 Alluvium
  - Q1 Terraces
- Pliocene
  - Pl Silt, Sands and Gravels
- Miocene
  - Tm Modelo shales and Sandstones
  - TmC1 Light brown massive Sandstone
  - TmC2 Red conlomeratic Sandstone
  - TmC3 Buff yellow conglomerate
  - TmC4 Red Sandstone
  - TmC5 Orange Conglomerate
  - TmC6 Gray, basal Conglomerate
- Eocene (?) - Miocene (?)
  - TE0-M0 Brown Breccia
  - TE0-M1 Volcanic flow
  - TE0-M2 Channel filling schistic Material
- Eocene (?) - Eocene (?)
  - TE-P-M1 Conglomerate
  - TE-P-M2 Brown red conglomerate and Sandstones
  - TE-P-M3 Yellow-green Sands & Shales
  - TE-P-M4 Gray Sandstone
- Eocene
  - TE Eocene Rocks (Massive yellow Sandst.)
- Pre-Cretaceous
  - P-K Gray Schist (Pelona)

- Contact boundary
- Probable contact
- Fault
- Probable fault
- Syncline axis
- Anticline axis
- Strike and dip of schist layer
- Strike and dip
- Overturned bed
