

List of Tables

Table 2-1: Summary of observed dynamic characteristics of full-scale wood-frame tests	15
Table 4-1: The Parkfield school building frequency and damping estimates calculated from MODE-ID. The peak structural acceleration is provided for each earthquake.	39
Table 4-2: Sum squared error between the measured and predicted responses from different MODE-ID models. Measurements are from the 1993, 1994, and 2004 Parkfield school records.	42
Table 4-3: Templeton hospital building frequency and damping estimates calculated from MODE-ID. The peak structural acceleration is provided for each earthquake.	58
Table 6-1: List of parameters used to characterize a structural component.	115
Table 6-2: Mean and standard deviation of the posterior PDF from all candidate models. Note: - indicates values constrained to be same as above parameters.	136
Table 6-3: Bayesian Model Selection with calculated probability of the model.	137
