

List of Figures and Tables

		Page
Chapter 1		
Figure 1.1	X-ray crystal structure of double-stranded DNA and examination of individual DNA base pairs.....	3
Figure 1.2	X-ray crystal and NMR structures of five protein–DNA complexes.....	4
Figure 1.3	The interferon beta enhanceosome.....	5
Figure 1.4	Known X-ray Crystal Structures Demonstrating Higher-order DNA Packing.....	7
Figure 1.5	Natural products that recognize DNA.....	8
Figure 1.6	X-ray crystal structures showing the molecular recognition of DNA by netropsin and distamycin.....	9
Figure 1.7	Recognition of all four base pairs of DNA by designed ligands based on the natural product distamycin.....	11
Figure 1.8	Molecular recognition of narrow, groove DNA tracts by linear beta-alanine linked polyamides.....	12
Figure 1.9	DNA minor groove hydrogen bond recognition elements.....	13
Table 1.1	Imidazole-capped eight-ring polyamides recognize a diverse library of DNA sequences.....	16
Figure 1.10	Examples of polyamides used for modulation of gene expression in living cell culture.....	18

Chapter 2A

Figure 2.1	Polyamide structures, binding models and nuclear localization in cell culture.....	28
Figure 2.2	DNA binding properties of the polyamides.....	29
Table 2.1	Polyamides designed to target GAA·TTC repeats in the frataxin gene....	29
Figure 2.3	DNase I footprint analysis for polyamide 1 binding to a radiolabeled (GAA·TTC) ₃₃ PCR product derived from plasmid pMP142 DNA, 5'- labeled on the purine strand; quantitative DNase I footprint analysis for polyamides 1 and 3 binding to a radiolabeled DNA containing a mismatch DNA sequence.....	30
Figure 2.4	Quantitative DNase I footprint analysis for polyamide 1-B	31
Figure 2.5	Polyamide 1 increases the levels of frataxin mRNA and protein in an FRDA lymphoid cell line.....	32
Table 2.2	Collected data showing the average ΔC_t for normal cells (GM15851) and FRDA cells (GM15850) before and after treatment with 1 at 2 μM	33
Table 2.3	Potential match and degenerate binding sites for polyamide 1 in significant genes listed for class comparisons where $P \leq 0.005$	36
Figure 2.6	Microarray analysis of polyamide effects on global gene expression.....	37
Figure 2.7	Effect of polyamide binding to plasmid DNA on sticky DNA stability...	39

Chapter 2B

Figure 2.8	Frataxin gene structure and model of polyamide-DNA binding.....	48
Figure 2.9	A list of polyamide structures utilized in footprinting studies on [AAG] ₃ repeats.....	51
Figure 2.10	Plasmid insert sequences utilized for footprinting [AAG] ₃ -targeting polyamides.....	52
Figure 2.11	Quantitative DNase I footprint titrations for an [AAG] ₃ -targeting poly-	

	amide and a 4-(2-aminoethyl) morpholine tail variant.....	53
Table 2.4	Binding affinities (K_a , M^{-1}) of polyamide 1 to sites I and II	54
Figure 2.12	Methidium-propyl EDTA (MPE) footprinting of polyamide 1 and affinity cleavage of polyamide 1E on pJWP10.....	54
Table 2.5	Polyamide length titration series.....	55
Figure 2.13	Quantitative DNase I footprint titrations showing effects of polyamide length on binding preferences and affinities.....	56
Figure 2.14	Quantitative DNase I footprint titrations examining binding affinities and preferences of double amino acid mismatch versus single amino acid mismatch polyamides on pJWP2.....	58
Table 2.6	Polyamide alternative mismatch control series.....	59
Figure 2.15	Quantitative DNase I footprint titrations showing the effects of BODIPY FL conjugation on binding preferences and affinities.....	60
Table 2.7	Polyamide dye conjugate series.....	60
Table 2.8	MALDI-TOF Mass Spectral Data for Polyamides.....	63

Chapter 3

Figure 3.1	Methods for analyzing DNA binding specificity.....	72
Figure 3.2	Polyamides for CSI Studies.....	74
Figure 3.3	Histogram of microarray intensities.....	76
Figure 3.4	Histogram of microarray fractional standard deviations.....	77
Figure 3.5	Insert sequences utilized in plasmids.....	78
Figure 3.6	DNase I footprinting gels and corresponding isotherms of polyamides 1 and 2 on pKAM3 and pKAM4.....	79
Table 3.1	Quantitative DNase I Footprinting Derived K_a values (M^{-1}) for Polyamides 1 and 2	79
Figure 3.7	DNase I footprinting gels and corresponding isotherms of polyamides 3 and 4 on pJWP17.....	80
Table 3.2	Quantitative DNase I Footprinting Derived K_a values (M^{-1}) for Polyamides 3 and 4	80
Figure 3.8	CSI array intensities correlate well with DNase I footprinting-determined K_a values.....	82
Figure 3.9	Correlation of footprinting data for polyamide 2 and CSI data and footprinting data for polyamide 4 and CSI data.....	83
Figure 3.10	Cy3-labeled polyamides and unlabeled polyamides correlate well.....	84
Figure 3.11	Sequence Logo for polyamide 2	85
Figure 3.12	Sequence Logo for polyamide 4	85
Figure 3.13	K_a -weighting components of individual sequence logos does not alter the sequence logo.....	85
Table 3.3	Microarray-Derived Binding Affinities and Specificities of All Single Base Pair Mismatch Sites for Polyamide 2	86
Table 3.4	Microarray-Derived Binding Affinities and Specificities of All Single Base Pair Mismatch Sites for Polyamide 4	87
