

Not Art and Science serve, alone;
Patience must in the work be shown.
A quiet spirit plods and plods at length;
Nothing but time can give the brew its strength.

Johann Wolfgang von Goethe, Faust.

To my parents, Nataša and Martin

Acknowledgements

First and foremost, I would like to thank my advisor, Emlyn Hughes, for his support and guidance throughout my graduate studies. His insistence on planning and scheduling enabled me to finish my Ph.D. studies in 5 years—before being saturated with the subject matter, thus allowing me to pursue my future career with enthusiasm. I am also very grateful to him for providing me with the opportunity to work at Stanford University, where I met many inspiring people and researchers. Steven Conolly made me a part of the Stanford PMRI group by treating me as one of his own students, well beyond his duty. His kindness and patience helped me explore my full potential, and I owe him most of the ideas behind my research. I was extremely fortunate to have worked with Greig Scott, who not only became a good friend by selflessly supporting me through many ups and downs and by being my biking partner, but devoted much of his morning-coffee routine to answering questions about my research and giving me valuable input and encouragement. His immense knowledge, combined with his modest attitude and his commitment to his work were truly admirable. Finally, I owe many thanks to Blaine Chronik, who was a constant source of inspiration by being a model scientist, researcher and teacher. I am very grateful to him for training me to work in the MRI research, and most of all, for sharing with me his thoughts on countless aspects of the scientific career.

I would like to express my thanks to my Ph.D. committee, J. Pine, S. Frautschi and S. Fraser, as well as to Stanford professors, D. Nishimura, J. Pauly and A. Macovski. I furthermore owe a great deal to my former physics professor and advisor, G. Cates, who believed in me and supported my research endeavors since I left Princeton.

Many other people at Caltech were instrumental in my research and my well-being. I am grateful to Dave Pripstein, who trained me during my first year at Caltech and provided a balance to my stressful schedule by hosting dinner parties for the whole group; to Steffen Jensen for his unforgettable wit, advice and support; and to Ray Fuzesy and Faye

Witharm for making the glass cells for my experiments as well as for their dedication and encouragement. I am fortunate to have had the technical help and expertise of Bob Carr, Jim Pendlay, and the Caltech glassblower, Richard Gerhart. I am much in debt to Georgia Frueh, whose efficient handling of all the administrative work made my stay away from Caltech manageable and whose care and concern were motherly like; to Donna Driscoll for always welcoming me with a smile and reassuring words when I showed up at her office door to register for an exam; to Jo-Ann Ruffolo, whose unforgettable enthusiasm made career counselling a joyous experience; to James Boyk for being the best piano teacher; and to the office of the International Student Programs, its staff, and in particular, its director, Parandeh Kia. Parandeh's generous and sincere concern for all students and her reliable character were a true asset to Caltech.

My years at Caltech would not have been as memorable without my fellow students and friends. Many thanks to Klejda for being my girl-confidant and for providing a balance to otherwise man-dominated field; to Mark for always being willing to listen to my lamenting; to Peter for his humor; and to Wenjin and Guodong for answering all my physics questions. I am very grateful to Claudine for letting me stay with her while I was "homeless" at Caltech; to Yasser for working with me on countless problem sets while being a loyal and non-judgmental friend; as well as to Olga, Michele, Andrew, Jason, and the "Yugo-crowd". I am equally grateful to my fellow students at Stanford: Ross, Sharon, Nate, Neal, Karla, Jin, Juan, Julie and Jong. Special thanks to Katie Crocker for her kind spirit; to Lara Quint for always being a friend; and to my friends in Providence: Monica for all the support and love, Michelle and Irfan, as well as Amin and Newal.

I am very much indebted to Cristina De Zan for helping me grow as a person during my graduate studies, to the Sisson-Coons family, and especially, to the Coker family for their support. Mrs. Coker's home-cooked Turkish delights and her kindness were of great help during my dissertation writing.

I would not have been able to go through my graduate studies were it not for the unconditional love and unwavering support of my family (aunt Ančka!) and, in particular, my parents. I am deeply grateful to them for believing in me, for standing behind my aspirations and dreams, and most of all, for providing me with a loving, warm, and intellectually fulfilling environment. Lastly, I would like to thank Demirkan, the love of my life, for his understanding, patience, and inspiration. I am truly fortunate to have him as my partner in life.
