Abstract	vi
Contents	viii
List of Figures	xi
List of Tables	xxv
1 Introduction	1
1.1 Mechanics in the Context of Cell Biology	1
1.2 Previous Work on Quantifying Cell-ECM Interactions	3
1.2.1 Traction Force Microscopy (TFM)	4
1.3 Previous Digital Volume Correlation (DVC) Techniques	7
1.4 Accomplishments	8
2 Development of a Quantitative Full-Field, Three-Dimensional Imaging Technique	10
2.1 Laser Scanning Confocal Microscopy (LSCM)	10
2.1.1 Overview of Laser Scanning Confocal Microscopy	11
2.1.2 Improving Axial Resolution through Deconvolution	13
2.2 Digital Volume Correlation (DVC)	15
2.2.1 Principle of DVC	15
2.2.2 Stretch Correlation Algorithm	18

2.3	Experimental Procedures	22
2.4	Uniaxial Compression Results	24
2.5	Spherical Inclusion Results	27
2.5.1	Analytical Solution of a Sliding Spherical Inclusion	28
2.5.2	PMMA Bead and Air Bubble Inclusion Results	29
2.6	Summary of LSCM and DVC Development	35
3	Application of LSCM and DVC to Migrating Fibroblasts	37
3.1	Experimental Procedure	37
3.1.1	Preparation of Activated Coverslips	38
3.1.2	Preparation of Polyacrylamide Films	38
3.1.3	Functionalization of Polyacrylamide Substrates with Fibronectin (FN)	39
3.1.4	Characterization of Fibronectin-Modified Films	40
3.1.5	Cell Culture	40
3.2	Mechanical Testing of the Substrate Material	41
3.3	Live Cell Imaging	43
3.4	Establishing LSCM and DVC Resolution for Polyacrylamide Gels	44
4	Quantifying Three-Dimensional Deformations of Migrating Fibroblasts	45
4.1	Three-Dimensional Displacements and Traction	46
4.1.1	Definition of the Three-Dimensional Displacement Vector	46
4.1.2	Traction Calculations	46
4.2	Three-Dimensional Cell-Induced Displacements During Cell Migration on Soft Substrates	48
4.3	Three-Dimensional Traction During Cell Migration on Soft Substrates	58
4.4	Three-Dimensional Displacements During Cell Migration on Stiff Substrates	68
4.5	Three-Dimensional Traction During Cell Migration on Stiff Substrates	75
4.6	Inhibiting Cell Contractility and Cell Locomotion	87

4.7	Comparison of Cell Response on Soft and Stiff Substrates	89
4.8	Implications of Three-dimensional Measurements for Current Cell Motility Models	92
5	Conclusions	97
5.1	Summary	97
5.2	Preliminary Cell Migration Studies on Artificial Extracellular Matrix Proteins (aECM)	98
5.3	Recommendation for Future Work	102
Appendix A Mechanically Tunable Thin Films of Photosensitive Artificial Proteins:		
	Preparation and Characterization by Nanoindentation	104
	Bibliography	125
