

## ACKNOWLEDGEMENTS

Through the course of my study in Caltech, I have gained much more than I originally anticipated. During the process of working on graduate research and writing this thesis, many things have happened that were better and worse than I expect. The period of time I spent at Caltech certainly brought major transformations to my entire life as a result of friendship, team work, persistence, intellectual education, sorrow, and merriment.

First, I would like to thank the Lord for His bountiful supply through these years and I would certainly acknowledge the reigning of His throne over all things through my toughest time in my personal life and school years. He is active and living God and my ultimate protector. I sincerely hope this thesis will in some way glorify Him for His purpose on earth.

I would like to acknowledge the research opportunity provided by my graduate advisor, Prof. Michael Roukes. Through the training in his research group, I have acquired incredibly many technical and personal skills that are indispensable in my career development. I am also privileged to work with so many talented people and benefit from them. Special thanks go to Prof. Carlo Callegari for his support both on the professional and the personal level. Carlo has made many breakthroughs in our research sometimes through our “constructive” confrontation and brainstorming. I very much enjoyed his company for the time we spent chatting about many small but important things about life in the cafe and the lab. I would also like to thank Philip Xiao-li Feng for his friendship, hands-on help in the lab, and efforts to get our results published. I have collaborated on various projects with Prof. Kamil Ekinci, Larry Schiviaone, Dr. Warren Fon, Dr. Darrel Harrington, Dr. Henry Xue-Ming Huang, Dr. Hong Tang, Dr. Ali Husain, Prof. Chris Zorman, Prof. Jim Hone, Dr. Henk Postma, Prof. Keith Schwab, Meher Prakash, Inna Kozinsky, and many others, whose

help has been invaluable for making my graduate research productive. I also thank our honorary group member, Prof. Philips Wigen from Ohio State University, for his personal support and encouragement.

I am grateful to my mother Li-chu Chu for her unconditioned love and support and dedicate my doctorate degree to her. During my stay at Caltech, major tragedy has happened to my family. Ever since, the prayer, fellowship, support, and practical advice from the brothers and sisters of the church in Monterey Park and Santa Clara have eased my pain and anxiety in this prolonged academic process of obtaining the diploma. Last but not least, I would like thank my fiancée, Jessie Yung-chieh Yu, for her thoughtfulness and prayer for me and my family. She has brought me joy and peace beyond words and knowledge and dissolved my confusion about life in many cases. As we begin the new phase in our life, I am indebted to her for her love through this period and for many years to come.
