

PROGRESS TOWARD THE SYNTHESIS OF (+)-ZOANTHENOL  
AND  
THE DEVELOPMENT OF AN ASYMMETRIC TSUJI ALLYLATION REACTION

Thesis by

Douglas Carl Behenna

In Partial Fulfillment of the Requirements

for the Degree of

Doctor of Philosophy

California Institute of Technology

Pasadena, California

2007

(Defended November 6, 2006)

## ACKNOWLEDGEMENTS

There are several people without whom this thesis would not have been possible. Brian is first among these. In addition to his impressive knowledge of science, Brian's enthusiasm, creativity, and dedication have been an inspiration to me during my successes and failures in graduate school. His guidance and support have been indispensable. I learn something every time he picks up a piece of chalk. I'm grateful for the latitude he's allowed me in pursuing some of my own ideas. I'm only beginning to appreciate how much moxie that requires when one is an assistant professor trying to get tenure. It's been a luxury to have an advisor whose door is always open to discuss problems or new ideas. Moreover, Brian and Erna are really nice people. They made the group feel like a family in the early days of the lab, frequently hosting parties at their apartment.

I also want to thank my committee members. Professor Dave MacMillan and Professor John Bercaw have been on my committee from the beginning. I'm grateful for the time and effort they clearly put into reviewing my work. Their insights and critique of my candidacy report and research proposals encouraged me to think about the big picture as well as details. More recently, Professor Bob Grubbs has added a valued perspective. Our group has benefited from collaborations with Professor Bill Goddard for several years, and I am particularly thankful that he was willing to join my committee with such little notice.

As an undergraduate at the University of Pennsylvania, Professor Dewey McCafferty took me into his lab and got me excited about research. Dewey allowed me to work on meaningful aspects of very interesting projects. I benefited from his broad

perspective in science and his belief in my abilities. Dewey was tremendously important in my decision to go to graduate school, and my decision to work for Brian was in no small part due to their many similarities. As a chemist at the bench, I was fortunate to learn much from a true master, Professor Predrag Cudic, then a postdoc in the McCafferty group.

I've benefited greatly from the support of the Fannie and John Hertz Foundation during my time in graduate school. In addition to essential financial support, I have greatly enjoyed the opportunities to attend the Foundation's conferences, and camaraderie of the other fellows.

I've been fortunate to collaborate with some truly exceptional chemists in the Stoltz group. Dr. Jeff Bagdanoff did important work in the early phases of the zoanthenol project. Jenn Stockdill and I have toiled together for three years to make the quaternary stereocenters in zoanthenol. Through good and bad results she's kept me motivated in the dog days of grad school. I'm lucky to be leaving that project in the hands of someone as talented and hardworking as she is. Additionally, her editing has kept the majority of this thesis from reading like a Borat skit.

One of the most rewarding aspects of grad school for me has been watching others in the group extend the Tsuji allylation project in creative ways. JT Mohr was my closest collaborator on the allylation chemistry. The “protonation bet” is sure to go down in Stoltz group lore. Besides being a creative chemist, he's always good for engaging discussion, obscure music (at least to me), and the occasional game of dry ice hockey. There is always room for more people on “Team Tsuji” these days. Dr. Kousuke Tani, Dr. Toyoki Nishimata, Nat Sherden, Dr. Dave White, Dr. Zoli Novák, and Smaranda

Marinescu have all contributed substantially to the development of the method. John Keith has been a great help as our computational collaborator and adopted member of Team Tsuji. It's difficult to draw a line in our group between methodology development and application in total synthesis. Sandy Ma, Dr. Andy Harned, John Enquist, and Jenny Roizen have made strides in both areas. Ryan McFadden, Mike Krout, Dr. Jeff Servesko, and Brinton Seashore-Ludlow have taken on the challenge of applying this work to natural products synthesis. Sandy Ma deserves special recognition as my longest tenured baymate and as an aficionado of 80s music. I've also had the good fortune to work with Megumi Abe, James Hegeman, and Eric Kwei while they were undergraduates. I learned a lot from the experience. I hope they did too.

In my mind all the Stoltz group plank owners stand out. Eric Ashley was my roommate for several years, and our late-night discussions on chemistry, politics, and life were a great frustration reliever. He and Jenn were always willing to get whichever was warranted, coffee or beer. In the early days of 204 Church, Dr. Jeremy May and Sarah Spessard were always the bay to visit for a good conversation. I always took inspiration from the work ethic of Professor Richmond Sarpong and Dr. Eric Ferreira.

While all the research groups in Church, Crellin, and Noyes were generous in donating chemicals and know-how in the early days of the Stoltz group, the Berkeley-era MacMillan group members deserve special mention. Professor Tehshik Yoon, Professor Vy Dong, Dr. Jake Wiener, and Dr. Chris Borths understood the pressure of working in a new lab, and were always willing to help. More recently, it was nice to hear a familiar accent in Dr. Nikki Goodwin's voice.

In addition to the faculty and students there are a number of people that make Caltech's chemistry department a great place to do science. I might be the last grad student that can remember a time before Dr. Mona Shahgholi and Dr. Scott Ross took over in the mass spectral and NMR facilities, respectively. Trust me, we are lucky to have them. Dr. Mike Day and Larry Henling did all the hard work of obtaining the X-ray structures in this thesis. They have an amazing ability to wring good data from the poor crystals I invariably grow. Six years of experience have convinced me that if Dana Roth can't find it, it doesn't exist. Dian Buchness has probably untangled more red tape for me than I even know about. Her efforts will be missed by the graduate students in this department.

My parents were my first teachers and continue to be my most stalwart supporters. I can only hope to live up to the role model they provided. Finally, I can't imagine going through grad school without my fiancée, Angela. Her encouragement, patience, and proofreading made this thesis possible. Somehow, I hope I can give her as much as she's given me.

## ABSTRACT

The stereoselective synthesis of all carbon quaternary stereocenters is an important problem in synthetic chemistry due to their common occurrence in bioactive compounds. The zoanthamine class of marine natural products highlights the challenge in constructing such stereocenters. After a summary of the isolation, structure determination, and biological activities of the zoanthamine natural products, published approaches toward their chemical synthesis are reviewed.

Synthetic strategies toward the carbocyclic portion of zoanthenol focus on the synthesis of the three challenging quaternary stereocenters located on the central C ring. An unusual acid-mediated S<sub>N</sub>' cyclization of a nucleophilic arene with an allylic alcohol forms the B ring and diastereoselectively constructs the benzylic C(12) quaternary stereocenter. However, difficulties with late-stage installation of the remaining C(9) quaternary stereocenter compelled the use of C ring synthons containing the vicinal C(9) and C(22) stereocenters installed at an early stage in the synthesis. Desymmetrization of a *meso*-anhydride containing vicinal quaternary stereocenters accomplishes this goal in an enantioselective fashion. Several C ring synthons bearing the vicinal quaternary stereocenters are elaborated with A ring fragments, and several methods for the formation of the C(11)-C(12) bond in these systems are explored. Ultimately, a radical conjugate addition strategy provides the carbocyclic core of zoanthenol with the correct relative configuration of all three quaternary stereocenters.

These efforts toward the synthesis of zoanthenol highlight the difficulty in generating enantioenriched  $\alpha$ -quaternary cycloalkanones derived from ketones with multiple acidic  $\alpha$ -hydrogens. The first direct catalytic enantioselective access to such products is achieved by the application of chiral bidentate phosphinoxazoline (PHOX) ligands to Tsuji's non-enantioselective allylation reactions. Cyclic allyl enol carbonates, silyl enol ethers, and allyl  $\beta$ -ketoesters all provide uniformly excellent yields and high enantioselectivity in the reaction. The limitations on the substrate scope of the reaction are discussed. Preliminary studies into the mechanism of these allylation reactions with prochiral enolate fragments suggest that they occur by a different mechanism than the outer-sphere nucleophilic attack commonly proposed in the alkylation of prochiral allyl fragments.

## LIST OF SCHEMES

CHAPTER ONE: A BIOLOGICAL AND CHEMICAL INTRODUCTION TO THE ZOANTHAMINE ALKALOIDS .....	1
Scheme 1.1 Hypothetical Polyketide Precursor .....	7
Scheme 1.2 Proposed Biosynthesis of the Norzoanthamines .....	9
Scheme 1.3 Equilibria Between Lactone and Enamine Isomers of Norzoanthamine .....	10
Scheme 1.4 Anomalous Reduction of Norzoanthamine .....	11
Scheme 1.5 Miyashita's Diels-Alder Construction of the ABC Rings of Norzoanthamine .....	17
Scheme 1.6 The Completion of Norzoanthamine .....	19
Scheme 1.7 Tanner's Approach to the ABC Ring System .....	21
Scheme 1.8 Uemura's Biomimetic Cyclization Approach to Norzoanthamine .....	22
Scheme 1.9 William's Efforts Toward Norzoanthamine .....	23
Scheme 1.10 Theodorakis's Annulation Approach to the ABC Ring System .....	24
Scheme 1.11 Theodorakis's Installation of the C(9) Quaternary Center .....	25
Scheme 1.12 Kobayashi's Sulfone Approach to the Heterocyclic DCEFG Ring System .....	26
Scheme 1.13 Hirama's Heck Strategy for the Zoanthenol ABC Ring System .....	27
Scheme 1.14 Hirama's Alternate Heck Strategy .....	28
Scheme 1.15 Hirama's Installation of the C(9) Methyl .....	29
Scheme 1.15 Hirama's Alternate Heck Strategy .....	29
CHAPTER TWO: EARLY APPROACHES TO THE SYNTHESIS OF ZOANTHENOL .....	38
Scheme 2.1 Retrosynthetic Analysis of Zoanthenol .....	41
Scheme 2.2 Retrosynthetic Analysis of Zoanthenol's ABC Ring System .....	42
Scheme 2.3 Diene Synthesis .....	43
Scheme 2.4 Attempted Diels-Alder Reactions .....	43
Scheme 2.5 Intramolecular Conjugate Additions in the Synthesis of Abietane Skeleton .....	44
Scheme 2.6 Intramolecular Conjugate Addition Approach .....	45
Scheme 2.7 Synthesis of A Ring Benzyl Bromide .....	46
Scheme 2.8 Syntheses of C Ring Enal .....	47
Scheme 2.9 Asymmetric Synthesis of Ketoester <b>134</b> .....	48
Scheme 2.10 Grignard Addition .....	49
Scheme 2.11 Attempted Cyclization .....	50
Scheme 2.12 Trifluoroacetic Acid-Mediated Cyclization .....	51
Scheme 2.13 Further Substrates for TFA-Mediated S <sub>N</sub> ' Cyclization .....	52
Scheme 2.14 Possible Pathways in the S <sub>N</sub> ' Reaction .....	53

Scheme 2.15	A Ring Deoxygenation .....	55
Scheme 2.16	Hydroboration of Ester <b>170</b> .....	56
Scheme 2.17	Reoxygenation of the C(20)-C(21) Olefin .....	58
Scheme 2.18	Confirmation of the Hydride Migration Stereochemistry .....	59
Scheme 2.19	Initial Strategy for Functionalization at C(9) .....	59
Scheme 2.20	Positional Selectivity in Kinetic Silyl Enol Ether Formation .....	60
Scheme 2.21	Amine Condensation with a Sterically Demanding Ketone .....	61
<b>APPENDIX ONE: SYNTHETIC SUMMARY OF THE S<sub>N</sub>' APPROACH TO ZOANTHENOL .....</b>		<b>97</b>
Scheme A1.1	Synthesis and Coupling of A and C Ring Synthons .....	98
Scheme A1.2	Asymmetric Synthesis of C Ring Intermediate .....	98
Scheme A1.3	S <sub>N</sub> ' Cyclization and Elaboration of the Zoanthenol ABC Rings .....	99
<b>CHAPTER THREE: CURRENT APPROACHES TO THE SYNTHESIS OF ZOANTHENOL: SYNTHESIS OF THE ABC RING SYSTEM CONTAINING ALL OF THE QUATERNARY STEREOCENTERS .....</b>		<b>184</b>
Scheme 3.1	Revised Retrosynthetic Plan for Zoanthenol .....	185
Scheme 3.2	Dauben's Synthesis of Cantharin .....	186
Scheme 3.3	Diels-Alder Reactions of DMMA .....	187
Scheme 3.4	Diels-Alder Route to <i>meso</i> -Diene <b>203</b> .....	188
Scheme 3.5	Desymmetrization of <i>meso</i> -Anhydride <b>203</b> .....	189
Scheme 3.6	Installation of 1,4-Oxygenation on Diene <b>203</b> .....	191
Scheme 3.7	Elaboration to the Complete Lactone C Ring Synthon .....	192
Scheme 3.8	Grignard Addition .....	193
Scheme 3.9	Acid-Mediated Cyclization .....	194
Scheme 3.10	Possible Mechanism for Enone Cyclization .....	195
Scheme 3.11	C Ring Elaboration .....	197
Scheme 3.12	Completion of the 1,3-Dioxepane Based C Ring Synthon .....	198
Scheme 3.13	Completion of the 1,3-Dioxepane-Containing Cyclization Substrate .....	198
Scheme 3.14	Completion of the Nitrile Homologated C Ring Synthon .....	200
Scheme 3.15	Completion of the Nitrile Containing Cyclization Substrate .....	200
Scheme 3.16	Trifluoroacetic Acid-Mediated Cyclization .....	202
Scheme 3.17	Derivatization and Separation of Allylic Alcohol <b>244</b> .....	202
Scheme 3.18	Base-Promoted Cyclization Strategy .....	203
Scheme 3.19	Palladium $\pi$ -Allyl Cyclization Strategy .....	204
Scheme 3.20	Trifluoroacetic Acid-Mediated Enone Cyclizations .....	205
Scheme 3.21	Bromination Methods for Enone <b>237</b> and <b>243</b> .....	206
Scheme 3.22	Heck and Metal-Halogen Exchange Strategies for Cyclization .....	207
Scheme 3.23	Radical Cyclization Methods for B Ring Formation .....	209
Scheme 3.24	Synthesis of C Ring Model Alkyne .....	210
Scheme 3.25	Alkyne Fragment Coupling .....	211

APPENDIX FOUR: SYNTHETIC SUMMARY OF APPROACHES TOWARD ADVANCED ZOANTHENOL ABC RING SYSTEMS CONTAINING THREE QUATERNARY STEREOCENTERS .....	266
 Scheme A4.1: Synthesis of C Ring Precursor with Vicinal Quaternary Centers .....	267
Scheme A4.2 Elaboration of the Lactone C Ring Synthon .....	267
Scheme A4.3 Completion and Cyclization of the Lactone C Ring Synthon .....	268
Scheme A4.4 Common Steps of the 1,3-Dioxepane and Acetonide C Ring Synthon Syntheses .....	268
Scheme A4.5 Synthesis and Cyclization of the 1,3-Dioxepane C Ring Synthon .....	269
Scheme A4.6 Synthesis of the Nitrile Acetonide C Ring Synthon .....	270
Scheme A4.7 Model C(1)-C(6) Fragment Coupling .....	271
 CHAPTER FOUR: THE DEVELOPMENT OF AN ASYMMETRIC TSUJI ALLYLATION REACTION .....	402
 Scheme 4.1 Trost's Allylic Alkylations with Prochiral Nucleophiles .....	404
Scheme 4.2 Tsuji's Allylation Methods .....	405
Scheme 4.3 Regiochemical Fidelity in Tsuji's Palladium-Catalyzed Allylation .....	406
Scheme 4.4 Catalytic Inactivity of ( <i>S</i> )- <i>t</i> -Bu-PHOX Oxide .....	409
Scheme 4.5 Determination of Absolute Stereochemistry .....	420
Scheme 4.6 General Mechanism for Silyl Enol Ether Allylation .....	422
Scheme 4.7 Allylation with Pd(II)•PF <sub>6</sub> Salt <b>356</b> .....	424
Scheme 4.8 Stereoablative Enantioconvergent Catalysis .....	426
Scheme 4.9 Methods for the Synthesis of Racemic Quaternary β-Ketoesters .....	428
Scheme 4.10 Useful Derivatives of (−)-(S)- <b>275</b> .....	433
Scheme 4.11 Synthesis of Derivatives with Spiro Quaternary Stereocenters .....	434
Scheme 4.12 Helmchen's Mechanism for Asymmetric Allylation of Prochiral Allyl Electrophiles .....	440
Scheme 4.13 Crossover Experiments with Deuterated Allyl Enol Carbonates .....	445

## LIST OF TABLES

### LIST OF ABBREVIATIONS

$[\alpha]_D$	specific rotation at wavelength of sodium D line
Ac	acetyl
ACN	acetonitrile
Ad	adamantyl
app	apparent
aq	aqueous
Ar	aryl group
atm	atmosphere
BBN	borabicyclo[3.3.1]nonane
BHT	2,6-di- <i>tert</i> -butyl-4-methylphenol
BINAP	2,2'-Bis(diphenylphosphino)-1,1'-binaphthyl
Bn	benzyl
Boc	<i>tert</i> -butoxycarbonyl
BOM	benzyloxymethyl
bp	boiling point
br	broad
BSA	<i>N,O</i> -bis(trimethylsilyl)acetamide
Bu	butyl
<i>n</i> -Bu	<i>n</i> -butyl
<i>t</i> -Bu	<i>tert</i> -butyl
Bz	benzoyl
<i>c</i>	concentration for optical rotation measurement

<sup>13</sup> C	carbon 13, isotope
/C	supported on activated carbon
°C	degrees Celsius
cat.	catalytic
calc'd	calculated
CAM	ceric ammonium molybdate stain
CAN	ammonium cerium (IV) nitrate
Cbz	benzyloxycarbonyl
CCDC	Cambridge Crystallographic Data Centre
comp	complex
CSA	camphorsulfonic acid
conv	conversion
Cy	cyclohexyl
d	doublet
dba	dibenzylideneacetone
DBU	1,8-diazabicyclo[5.4.0]undec-7-ene
DCC	1,3-dicyclohexylcarbodiimide
DCE	1,2-dichloroethane
DCM	dichloromethane or methylene chloride
DEAD	diethyl azodicarboxylate
DIBAL	diisobutylaluminum hydride
DIOP	2,3-O-isopropylidene-2,3-dihydroxy-1,4-bis(diphenylphosphino)butane
DIPA	diisopropyl amine

DMA	N,N'-dimethylacetamide
DMAP	4-dimethylaminopyridine
dmdba	3,5,3',5'-dimethoxydibenzylideneacetone
DME	1,2-dimethoxyethane
DMF	dimethylformamide
DMP	Dess-Martin periodinane
DMPU	N,N'-dimethyl propylene urea
DMS	dimethylsulfide
DMSO	dimethylsulfoxide
DNA	deoxyribonucleic acid
DPPB	1,4-bis(diphenylphosphino)butane
DPPE	1,2-bis(diphenylphosphino)ethane
dr	diastereomeric ratio
ee	enantiomeric excess
<i>E</i>	entgegen olefin geometry
EI	electrospray ionization
equiv	equivalent(s)
Et	ethyl
EtOAc	ethyl acetate
FAB	fast atom bombardment
g	gram
GC	gas chromatography
Grubbs II	Grubbs' second generation metathesis catalyst

[H]	reduction
h	hour(s)
hν	light
<sup>1</sup> H	proton
<sup>3</sup> H	tritium
HMDS	hexamethyldisilazide or hexamethyldisilizane
HMPA	hexamethylphosphoramide
HPLC	high performance liquid chromatography
HRMS	high resolution mass spectroscopy
Hz	hertz
η <sup>n</sup>	eta; n = number of atoms coordinated to metal
IC <sub>50</sub>	concentration required for 50% growth inhibition
imid.	imidazole
IR	infrared spectroscopy
J	coupling constant
k <sub>n</sub>	rate constant, n refers to various reactions, negative n indicates reverse reaction
kcal	kilocalories
KHMDS	potassium hexamethyldisilazide
L	liter
LAH	lithium aluminum hydride
LDA	lithium diisopropylamide
LD <sub>50</sub>	Lethal Dosage to kill 50% of test population
LiHMDS	lithium hexamethyldisilazide

<i>m</i>	meta
m	multiplet or milli
$\mu$	micro
M	mega, metal, or molar
<i>m/z</i>	mass to charge ratio
<i>m</i> -CPBA	<i>meta</i> -chloroperbenzoic acid
Me	methyl
( <i>R,R</i> )-Me-DUPHOS	(-)-1,2-Bis((2 <i>R</i> ,5 <i>R</i> )-2,5-dimethylphospholano)benzene
MEK	methyl ethyl ketone
MH-60	mouse myelohybridoma cells
MIC	minimal inhibitory concentration
min	minute(s)
mol	mole(s)
mol%	percentage used based on moles
MOM	methoxymethyl
( <i>R</i> )-MOP	( <i>R</i> )-(+)-2-(Diphenylphosphino)-2'-methoxy-1,1'-binaphthyl
mp	melting point
Ms	methanesulfonyl
MS	molecular sieves
MTPA	$\alpha$ -methoxy- $\alpha$ -(trifluoromethyl)phenylacetic acid
MVK	methyl vinyl ketone
N	normal

NBS	<i>N</i> -bromosuccinimide
NMR	nuclear magnetic resonance
NOE	nuclear Overhauser effect
<i>o</i>	ortho
[O]	oxidation
<i>p</i>	para
PCC	pyridinium chlorochromate
PDC	pyridinium dichromate
PG	prostaglandin
Ph	phenyl
pH	hydrogen ion concentration in aqueous solution
Ph-H	benzene
PHOX	phosphinooxazoline
Phth	phthalimidyl
Piv	pivaloyl
PMA	phorbol myristate acetate
PMB	<i>p</i> -methoxybenzyl
PMBM	<i>p</i> -methoxybenzyloxymethyl
<i>p.o.</i>	administered orally
ppm	parts per million
PPTS	pyridinium <i>p</i> -toluenesulfonate
Pr	propyl
<i>i</i> -Pr	isopropyl

psi	pounds per square inch
Py or Pyr	pyridine
q	quartet
QUINAP	(R)-(+)-1-(2-Diphenylphosphino-1-naphthyl)isoquinoline
R	alkyl group
<i>R</i>	rectus (configurational)
Red-Al	sodium bis(2-methoxyethoxy)aluminum hydride
$R_f$	retention factor
RNA	ribonucleic acid
s	singlet
<i>S</i>	sinister (configurational)
SAR	structure-activity relationship
sat.	saturated
stoich.	stoichiometric
t	triplet
TBAF	tetrabutylammonium fluoride
TBAT	tetrabutylammonium triphenyldifluorosilicate
TBDPS	<i>tert</i> -butyldiphenylsilyl
TBS	<i>tert</i> -butyldimethylsilyl
temp	temperature
TEA	triethylamine
TES	triethylsilyl
Tf	trifluoromethanesulfonyl

TFA	trifluoroacetic acid
THF	tetrahydrofuran
TIPS	triisopropylsilyl
TLC	thin-layer chromatography
TMEDA	tetramethylethylenediamine
TMS	trimethylsilyl
TOF	turnover frequency
TON	turnover number
TPAP	tetrapropylammonium perruthenate
TROC	trichloroethoxycarbonyl
Ts	<i>p</i> -toluenesulfonyl or <i>p</i> -toluenesulfonic
UV	ultraviolet
Vis	visual wavelength
v/v	volume per volume
w/v	weight per volume
X	halide or trifluoromethanesulfonate
Z	zusammen olefin geometry
