List of Figures **xiii**

List of Tables **xvi**

1 Introduction **1**

2 Effects of Spatial Confinements on Biochemical Reactions **7**

2.1 Chemical Reactions of Low Copy Number 7

2.1.1 System-size Resonance of a Reduced Model of Belousov–Zhabotinsky Reaction 7

2.1.2 Stochastic Defocusing of Peroxidase–Oxidase System in Response to Initial Conditions 15

2.2 The Effect of Diffusion on Confined Enzymatic Reaction Cascades 22

2.2.1 Introduction 22

2.2.2 Molecular Network 24

2.2.3 The Coupling among Molecular Networks 31

2.2.4 Effect of Source Oscillation 42

2.3 Statistical Properties of Molecular Collisions 45

2.3.1 Analytical Result of Off-time Distribution 45

2.3.2 Numerical Simulation of the Reactant–Reactant and Reactant–Wall Collision 51

3 Fast Mixing and Reaction Initiation Control of Single-enzyme Kinetics in Confined Volumes **61**

3.1 Introduction 61

3.2 Materials and Methods 63

3.3 Results and Discussion 64
3.3.1 Mixing and Encapsulation 65
3.3.2 Single-enzyme Experiments 67
3.4 Summary and Conclusions 69

4 Enzymatic Reactions in Femtoliter Droplets **75**

4.1 On-chip Generation and Manipulation of Water Droplets 75
4.1.1 Introduction 75
4.1.2 An Integrated Platform for Digital Microfluidics 78
4.1.3 Instrument Control and Data Acquisition 80
4.2 Shear-driven Redistribution of Surfactant Affects Enzyme Activity in Well-mixed Femtoliter Droplets 85
4.2.1 Introduction 87
4.2.2 Experimental Section 90
4.2.3 Results and Discussion 92
4.2.4 Conclusion 101

5 Conclusion and Future Directions **129**

Bibliography **131**

List of Figures

1.1 Illustration of crowded environment 2

1.2 Lysogeny versus lysis in *E. coli* infected by phage-λ 3

2.1 Spatial patterns formed by bromate–CHD system 8

2.2 Bifurcation diagram of bromate–CHD system 10

2.3 Deterministic and stochastic simulation of bromate–CHD system 11

2.4 The power spectral density 12

2.5 Signal-to-noise ratio as a function of system volume and bifurcation parameter 13

2.6 Deterministic and stochastic simulation results for peroxidase–oxidase system 18

2.7 Convergence of oscillation probability 20

2.8 Oscillation probability as a function of volume and bifurcation parameter 21

2.9 Traffic time 25

2.10 A schematic description of an enzyme in a molecular network 27

2.11 A possible realization of the enzymatic cycle in figure 2.10 28

2.12 Simulation results of molecular network 30

2.13 Connected molecular networks 32

2.14 Simulation of two connected molecular networks 34

2.15 The solution to diffusion equation 35

2.16 The discretization of one-dimensional space into several cells 36

2.17 The effect of diffusion on a single molecular network 36

2.18 Autocorrelation function of a molecular network coupled with the environment by diffusion 37

2.19 The correlation function of two molecular networks coupled by diffusion 38
2.20 Statistical analysis of the dynamics of two molecular networks coupled by diffusion . . 40
2.21 Cross-correlation function of two molecular networks coupled by diffusion 41
2.22 The autocorrelation function of two or three molecular networks coupled by diffusion 41
2.23 The Fourier analysis of a molecular network with an oscillatory source 43
2.24 The period of oscillation as a function of the strength of the external source 44
2.25 The relative height of the signal peak due to external source 45
2.26 The effect of noise strength 46
2.27 The effect of noise strength on the relative height of the signal peak due to external source 46
2.28 The collision between two particles 47
2.29 The off-time distribution of the collision between two particles 48
2.30 The collision between a diffusing particle and the reactor wall 49
2.31 The off-time distribution of the collision between a molecule and the reactor wall . . . 51
2.32 The definition of influence sphere 53
2.33 The solution to equations (2.22) and (2.23) 57
2.34 The position and time of the collision events between a pair of substrates and enzymes 59
2.35 The position and time of the collision events between an enzyme and reactor wall . . 60

3.1 Layout of the microfluidic device with femtoliter chamber 65
3.2 Mixing by chaotic advection by herringbone structures in the microfluidic channel . . 66
3.3 The sealing of microchambers 67
3.4 Enzyme reactions in microchambers 68
3.5 Bulk measurement of β-Gal enzyme activities by a stopped-flow instrument 73

4.1 The formation of water droplets in oil in a microfluidic channel 76
4.2 An integrated platform for digital microfluidics 78
4.3 Layout of microfluidic device 79
4.4 The user interface of the Matlab program to control pressure regulators 81

4.5 The user interface of a more advanced Matlab program to control pressure regulators 82
4.6 Labview program to control the counter 83
4.7 Relay circuit to control the opening of solenoid valve 84
4.8 Darlington pair to control the opening of solenoid valve 84
4.9 Reproducible landing of droplets after stopping flow 86
4.10 Labview program to control the valve closing by fluorescence signal 87
4.11 Schematic of the microfluidic device used to produce droplets 89
4.12 Initial reaction rates in femtoliter droplets 96
4.13 Bright-field images of splitting-off process 98
4.14 Standard deviation of intensity at interface between fluorescent and nonfluorescent streams at aqueous inlet of microfluidic device 106
4.15 Photon number histogram from plugs containing resorufin 108
4.16 Time traces of fluorescent plugs moving in the main channel 108
4.17 Daughter droplet size distribution as functions of backing pressure at the oil inlet . . 110
4.18 Droplet stability 112
4.19 Lineweaver–Burk plot for β-Gal 112
4.20 Dose-response plot of enzyme initial rate as a function of galactose concentration . . . 113
4.21 Autohydrolysis of RGP due to singlet oxygen 114
4.22 Photobleaching and its effect in droplets 115
4.23 Confocal images of emulsions containing Magnesium Green or SNARF 116
4.24 Enzyme reaction in mother plugs, plug length, and droplet diameter as functions of flow rates 118
4.25 Initial enzyme reaction rate with PEG 600 as a crowding agent 121
4.26 Interfacial tension measurements from pendant aqueous drops suspended in oil phase 124
4.27 Confocal images of water–oil microemulsions containing Alexa568-β-Gal 125
4.28 Surface-to-volume ratio scaling of surface-bound enzyme 128
4.29 Epifluorescence microscope image of droplet containing Alexa568-β-Gal 128

List of Tables

2.1 Reduced model of bromate–CHD system 9

2.2 The peak frequency of power spectrum density as a function of volume and bifurcation parameter 13

2.3 BFSO model for peroxidase–oxidase system 17

2.4 Classification of spatial stochastic simulation algorithms 58

4.1 Shear stresses for nascent daughter droplets at the T-junction 100

4.2 Mixing tests in daughter droplets with Alexa568-β-Gal 106

4.3 Determination of shear stresses for nascent daughter droplets at T-junction 119
