File (.JPG)	Head	Date*	Time*	Photographer	Notes
-------------	------	-------	-------	--------------	-------

Notes:

- * dates and times are given in local time: UTC +7
- (1) one of a stereo pair
- (2) photo shows slab LDL-4A
- (3) photo shows slabs LDL-4A (left) and LDL-4B (right)
- (4) photo shows slab LDL-4B
- (5) close-up of late 2003 diedown on outer rim and subsequent growth
- (6) photo shows microatoll and the algae-encrusted circle from whence it is inferred to have been transported by the 2004 tsunami
- (7) grass now covers the formerly active beach berm and living reef; 2004 tsunami debris still litters the landscape
- (8) microatolls interpreted in the field to belong to the LKP-3 population, based on their proximity and similar elevations and morphologies
- (9) LKP-3 is in the background, with the slab removed
- (10) one of a stereo pair of the high middle ring
- (11) the head is turned on its side for this photograph
- (12) view is of the top of the head, which was found face-down and buried in the soil
- (13) after being slabbed, half of the head was placed back in the position in which we found it, with its top down, for this photograph
- (14) the head is upside-down from the orientation in which it originally grew
- (15) this photo shows LKP-7 amidst the inferred LKP-3 population of heads
