

# List of Figures

1.1	A generic form of a quantum network . . . . .	1
1.2	A matter-light quantum interface in action . . . . .	3
1.3	Off-resonant elastic scattering from atomic ensembles . . . . .	8
1.4	Quantum interferences between indistinguishable photons from heterogeneous single-photon source . . . . .	10
1.5	A phase shift in the collective excitation due to an off-resonant ac-Stark shift beam . . . . .	11
1.6	Unprecedented performance of photo-thermo-refractive holographic gratings . . . . .	13
2.1	Superradiant states and atomic Fresnel number . . . . .	20
2.2	Generating and retrieving collective excitations to photons . . . . .	23
2.3	Reversible matter-light quantum interface via dark-state polariton . . . . .	35
2.4	Susceptibility $\bar{\chi}_s$ of EIT medium . . . . .	38
2.5	Coherent evolution of dark state polariton . . . . .	40
2.6	Reversible mapping of a coherent state to and from an atomic memory . . . . .	42
2.7	Spin-wave decoherence due to inhomogeneous Zeeman broadening . . . . .	46
2.8	Spin-wave dephasing due to atomic motion . . . . .	48
3.1	Entanglement generation and verification . . . . .	51
3.2	Passive stability of a Mach-Zehnder interferometer formed by two calcite crystals . . . . .	52
3.3	Concurrence as a function of the normalized cross correlation function $g_{12}$ . . . . .	54
3.4	Concurrence as a function of the storage time . . . . .	56
4.1	Setup for distributing entanglement between two quantum nodes ( $L, R$ ) separated by 3 meters . . . . .	62
4.2	Temporal growth of the suppression $h_X^{(2)}$ . . . . .	65
4.3	Measured correlation function . . . . .	67
4.4	Measured $CHSH$ parameters $S_{\pm}$ and the violation of Bell inequality . . . . .	68
4.5	Conditional probability as a function of the storage time . . . . .	73
4.6	Time dependence of the total conditional count rates . . . . .	74
4.7	Conditional enhancement . . . . .	75

5.1	Quantum repeater architecture . . . . .	79
5.2	<i>DLCZ</i> building block in a counter-propagating and off-axis configuration . . . . .	80
5.3	Entanglement generation and connection . . . . .	82
5.4	Procedure for verifying entanglement between two atomic ensembles . . . . .	84
5.5	Experimental setup for entanglement connection . . . . .	87
5.6	Coherence between the two atomic ensembles $L$ and $R$ induced by entanglement connection . . . . .	89
5.7	Reconstructed density matrix for the fields after entanglement connection . . . . .	90
5.8	Theoretical prediction for the degree of entanglement after entanglement connection . . . . .	91
6.1	Overview of the experiment . . . . .	94
6.2	Single-photon storage and retrieval for a single ensemble . . . . .	95
6.3	Quantum-state tomography on the input and output optical modes . . . . .	97
6.4	Qualitative equivalence between EIT and CPT . . . . .	104
6.5	EIT spectroscopy with lin//lin configuration . . . . .	105
6.6	EIT spectroscopy with $\sigma^+//\sigma^+$ configuration . . . . .	106
6.7	Phase-locked lasers for EIT spectroscopy . . . . .	106
6.8	Investigation of reversible transfer of a coherent state to and from an atomic memory . . . . .	108
6.9	Iterative optimization scheme for maximizing storage and retrieval efficiency . . . . .	111
6.10	Time-reversal optimization of EIT transfer efficiency . . . . .	112
7.1	Verification interferometer for measuring sum uncertainty . . . . .	116
7.2	Minimum variances for various types of four-mode states containing one photon . . . . .	118
7.3	Scatter plots of the variance of the single-photon part for randomly chosen fully separable states . . . . .	122
7.4	Scatter plots of the variance of the single-photon part for randomly chosen biseparable states with at most two-mode entanglement . . . . .	123
7.5	Scatter plots of the variance of the single-photon part for randomly chosen biseparable states with at most three-mode entanglement . . . . .	124
7.6	Scatter plots of the variance of the single-photon part for randomly chosen biseparable states with at most three-mode entanglement for $q = 0.4$ . . . . .	125
7.7	Scatter plots of the variance of the single-photon part for randomly chosen biseparable states with at most three-mode entanglement $q = 0.7$ . . . . .	125
7.8	Scatter plots of the variance of the single-photon part for randomly chosen biseparable states with at most three-mode entanglement $q = 0.9$ . . . . .	126
7.9	Boundaries for the minimum variance for the three types of biseparable and fully separable states as functions of $y_c$ . . . . .	127
7.10	Minimum variance for imbalanced beamsplitters . . . . .	131
7.11	Minimum variance for imbalanced losses . . . . .	131

7.12	Minimum variance for imbalanced beamsplitters and losses . . . . .	132
8.1	Diagram of our entanglement generation and verification setups . . . . .	137
8.2	Detection of entanglement between two optical modes using uncertainty relations . . . . .	140
8.3	Decoherence of multipartite entanglement induced by phase noise . . . . .	142
8.4	Statistical transition of multipartite entanglement . . . . .	143
8.5	Interference fringe in the four-mode sum uncertainty setup . . . . .	145
8.6	A high-bandwidth, dynamic range fiber stretching module . . . . .	146
8.7	Correction factor $c$ as a function of two-photon contamination $y_c$ . . . . .	149
8.8	Comparison between the directly measured concurrence and the inferred concurrence . . . . .	152
8.9	A simplified setup for the verification protocol . . . . .	153
8.10	The effect of imbalances and losses to the determination of $\Delta_b^{(3)}$ . . . . .	154
9.1	Quantum interfaces for multipartite quantum networks . . . . .	157
9.2	Quadripartite entanglement among four atomic ensembles . . . . .	160
9.3	Dissipative dynamics of atomic entanglement . . . . .	162
9.4	Experimental schematics for entanglement generation, transfer, and verification . . . . .	168
9.5	Various imperfections in verification interferometer . . . . .	172
9.6	Projection fidelities for quantum uncertainty relations . . . . .	174
9.7	Numerical optimizations for the minimal entanglement parameters and the uncertainty bounds . . . . .	176
9.8	Statistical evolutions of the individual entanglement parameters . . . . .	178
9.9	Temporal decay of coherences stored in four atomic ensembles . . . . .	179
9.10	Temporal evolutions of the individual entanglement parameters . . . . .	181
10.1	Increasing laboratory complexity . . . . .	188
10.2	Tapered fiber profile measured by a scanning electron microscope . . . . .	189
10.3	A nanofiber trap for atomic ensembles . . . . .	190
10.4	Probing cold atoms with a tapered nanofiber . . . . .	191
10.5	Trapping single atoms with nanofibers . . . . .	192
A.1	Controlled impedance transmission lines . . . . .	197
A.2	Circuit diagram for conditional control logic for triggering and relaying various signals . . . . .	201
A.3	PCB board for conditional control logic for triggering and relaying various signals . . . . .	202
A.4	Circuit diagram for diode laser current controller . . . . .	204
A.5	PCB board for laser diode current controller . . . . .	205
A.6	Circuit diagram for phase stabilization and intensity stabilization servo . . . . .	207
A.7	PCB board for locking interferometers and intensity stabilization . . . . .	208

B.1	Global minimization of $f(\vec{\lambda})$ via simulated annealing . . . . .	210
B.2	Accuracy and precision of the random search algorithm . . . . .	211
