

TABLE OF CONTENTS

Title page	i
Copyright Page	ii
Acknowledgements	iii
Abstract	vii
Published Content and Contributions	viii
Table of Contents	ix
Chapter 1: Introduction to the immune system, lentivectors, and transmission of HIV-1	1
Overview of thesis	2
Overview of Dendritic Cells	2
Overview of Innate Immune Recognition of Viral Pathogens	3
Overview of cytosolic DNA sensors of the Innate Immune System	5
Overview of DC vaccines including LVs	7
Overview of cell-to-cell transmission of HIV-1	8
References	9
Table 1. List and description of human TLRs	14
Figure 1. Putative cytosolic DNA sensors	15
Figure 2. Schematic of plasmids required to generate lentivector	16
Figure 3. Mechanisms of DC-mediated HIV-1 transmission to CD4 ⁺ T cells	17
Chapter 2: Dendritic cell targeted lentivector immunotherapy	18
Abstract	19
Introduction	20
Results	22
Discussion	33
Experimental Procedures	38
Figure Legends	47
References	54
Supplemental Figure Legends	61
Figure 1. Lentivector (LV) pseudotransduction delivers proteins and stimulates dendritic cells (DCs)	63
Figure 2. LV DNA, genome, and capsid are not required for DC maturation and CD8 ⁺ T cell priming	64
Figure 3. LV activation of DCs and subsequent CD8 ⁺ T cell priming is dependent on STING, but not MyD88, TRIF, or IPS-1	65
Figure 4. Viral-like particles (VLPs) activate DCs and antigen-specific CD8 ⁺ T cells via the STING pathway	66
Figure 5. Viral fusion is required for DC activation	67
Figure 6. LV particles and VLPs contain human genomic DNA recognized by the host STING pathway	68
Figure S1. LVs pseudotransduce and activate mouse BMDCs, related to Figures 1 and 3	69
Figure S2. LVs and VLPs carry heterologous proteins, related to Figure 2	70
Figure S3. MyD88 ^{-/-} /TRIFLps2/Lps2 or MyD88 ^{-/-} /IPS-1 ^{-/-} BMDCs are fully activated by LVs, related to Figure 3	71
Figure S4. Normal T cell subsets in STING-deficient mice under non-stimulatory conditions, related to Figure 3	72
Figure S5. LV particles and VLPs contain human genomic DNA, related to Figure 6	73
Chapter 3: Dendritic cell-to-T cell infection	74
Abstract	75
Introduction	76
Results	76
Discussion	78
Experimental Procedures	80

Figure Legends	82
References	83
Supplementary Figure Legends	85
Figure 1. DCs significantly amplify T cell infection	86
Figure 2. DC-T cell infection is drug-resistant	87
Figure 3. DC-T cell drug resistance depends on physical contact between cells	88
Figure 4. DC-to-T cell transmission is dependent on the amount of virus in the system	89
Supplementary Figure 1. LPS activation of monocyte-derived DCs	90
Supplementary Figure 2. DC amplification of HIV infection of T cells in six donors	91
Supplementary Figure 3. DC amplification of T cell infection with different HIV-1 strains	92
Chapter 4: Conclusions and Future Directions	93
Conclusions	94
Significance	94
Innovation	96
Future Directions	96
References	97
